BATHROOM HEATING ACCESSORIES

UNDERFLOOR HEATING FOR BATHROOMS

- ◆ **'Underfloor Heating'** is the best way of effectively & uniformly warming up of tiles, marbles & wooden floors
- ◆ With a floor temperature maintained between 24-28°C, heat radiates up into the room overcoming the cold inertia and ensuring any supplementary heating is more efficient
- ◆ With floor heating the bathroom areas will be warmer - towels will dry while hanging on the towel rail and the likelihood of mold and damp will be greatly reduced
- ◆ The warm floor will quickly evaporate any water spilt, resulting in improved safety
- ◆ Heating from the floor up is the most efficient way to heat a room uniformly.
- ◆ Direct heating will provide a very quick response time and greater flexibility of temperature control
